**PRESS RELEASE**

**Mayfair jewel raiders forced to flee empty handed**

Valuable watches and jewellery were recently saved from robbery by a simple, inexpensive yet totally reliable hi-tech security system at a prestigious Mayfair luxury goods store.

“When the villains smashed their way in with sledgehammers, they were surprised by an impenetrable fog screen that covered the watch and jewellery cabinets. Unable to see a thing, they fled the scene without stealing anything. It was all over in 26 seconds.”

Having already suffered substantial stock losses in an earlier raid, the store had wisely installed a state-of-the-art Fog Bandit security system. This works by projecting an impenetrable fog blanket that covers 6 metres in just 2 seconds. The fog is harmless, leaves no residue and is safe in any environment

What can't be seen can't be stolen and in just 5 seconds, the Fog Bandit can fill an average sized shop, office or showroom of 140 cubic metres. Thanks to its patented high-pressure system, it delivers a dense, visually impenetrable fog at an incredible 28 cubic metres per second - it's the fastest security fogging system of its kind in the world.

Any robbery is a frightening and intimidating experience. Criminals know this and use it to their advantage, relying on surprise and speed to achieve their aims before staff can react. High technology Fog Bandit however is faster still, foiling their intentions and significantly strengthening the deterrent against future attacks. In the case of the Mayfair store two criminals wearing motorcycle helmets arrived on mopeds and instantly smashed their way through the glass entrance door. Almost immediately, the Store Manager initiated his high-speed Fog Bandit security system and the villains ran off.

Fog Bandit can also alert the police, security organisations and individuals by telephone. The same unit can be used for 24/7 protection; with a short controlled activation for daytime deterrent and a longer overnight activation that protects valuable equipment, stock and property against theft or damage until the authorities arrive. Most importantly, Fog Bandit ensures that disruption to business is reduced to a minimum as David Cole 'The Alarming Man' concludes:

“Normal trading can be rapidly resumed, resulting in considerable savings in cost, time and effort. Fog Bandit also helps keep insurance loss claims to a minimum by protecting assets from theft and protecting property against the possibility of internal damage.”
